

How do we create a form with Templates

1. Overview

Creating a form using templates allows admins to quickly build forms in Bsharp Converse by using pre-defined structures. Templates help standardize form creation across different use cases while allowing edits before the form is finalized.

2. When to Use

Use this option when:

- You want to create a form using an existing structure
- You need standard forms for sales, HR, education, or marketing use cases
- You want to avoid creating forms manually from scratch
- You want to edit a pre-built form before assigning it to users

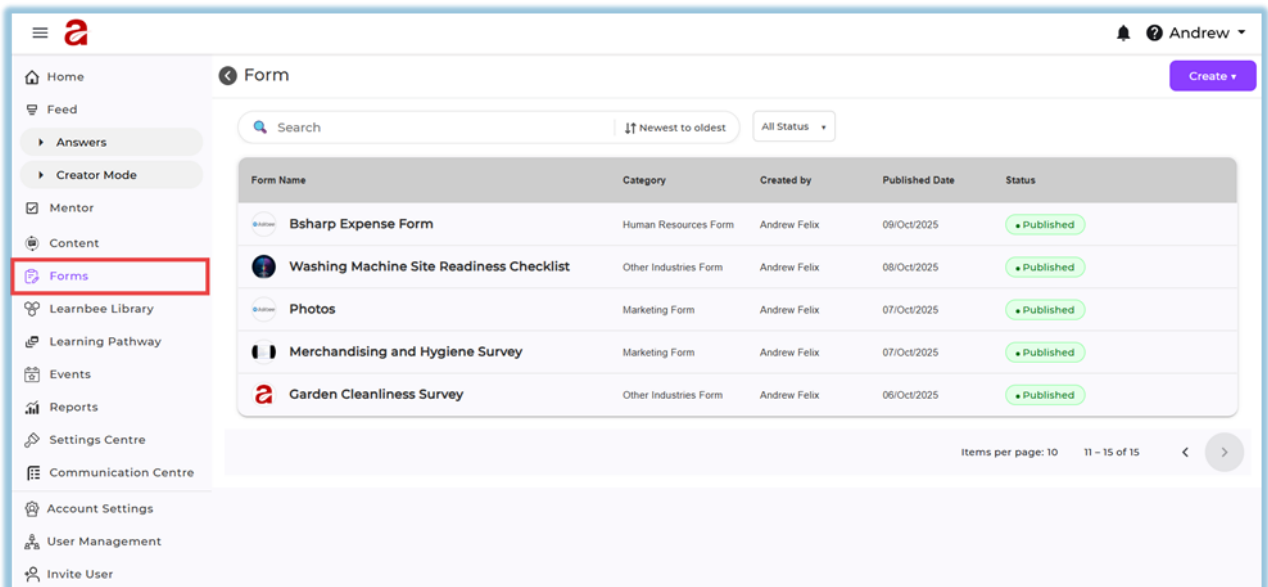

3. Concepts

- **Forms** - Data collection items created for users
- **Templates** - Pre-built form structures available by category
- **Form Categories** - Groupings such as Sales, Education, HR, Marketing
- **Form Builder** - Editor used to review and modify the template
- **Save** - Action used to store the created form

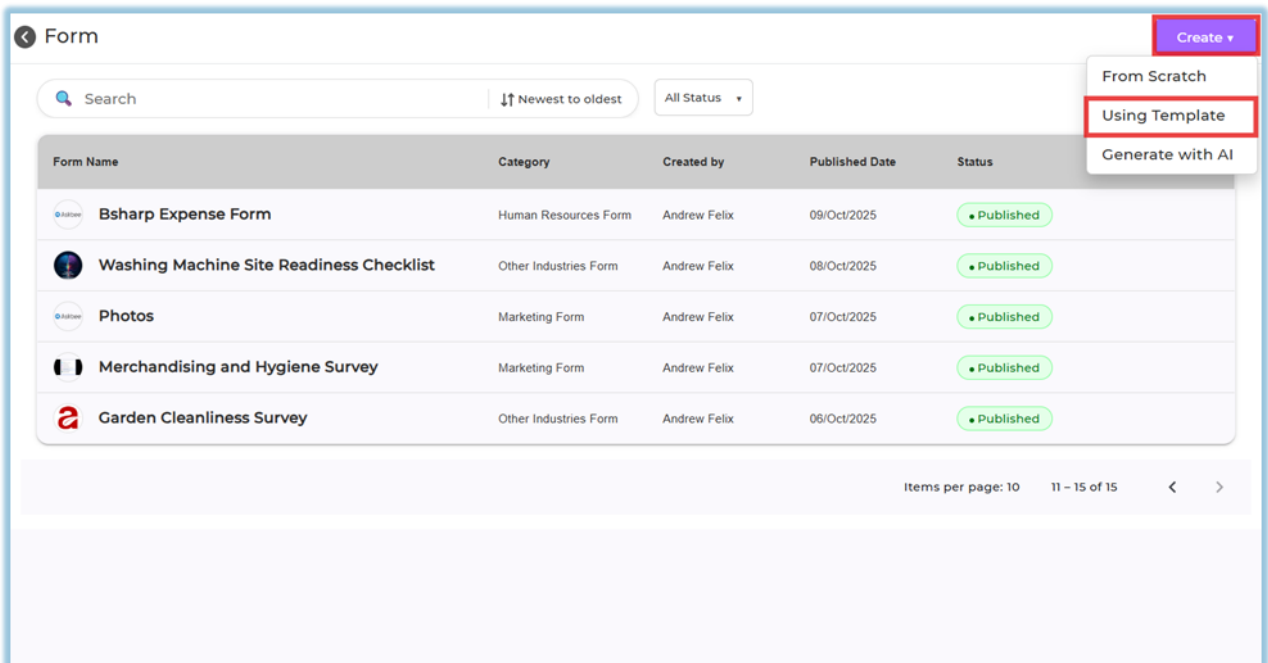

4. Set Up Guide

1. Open the menu and go to **Forms**.

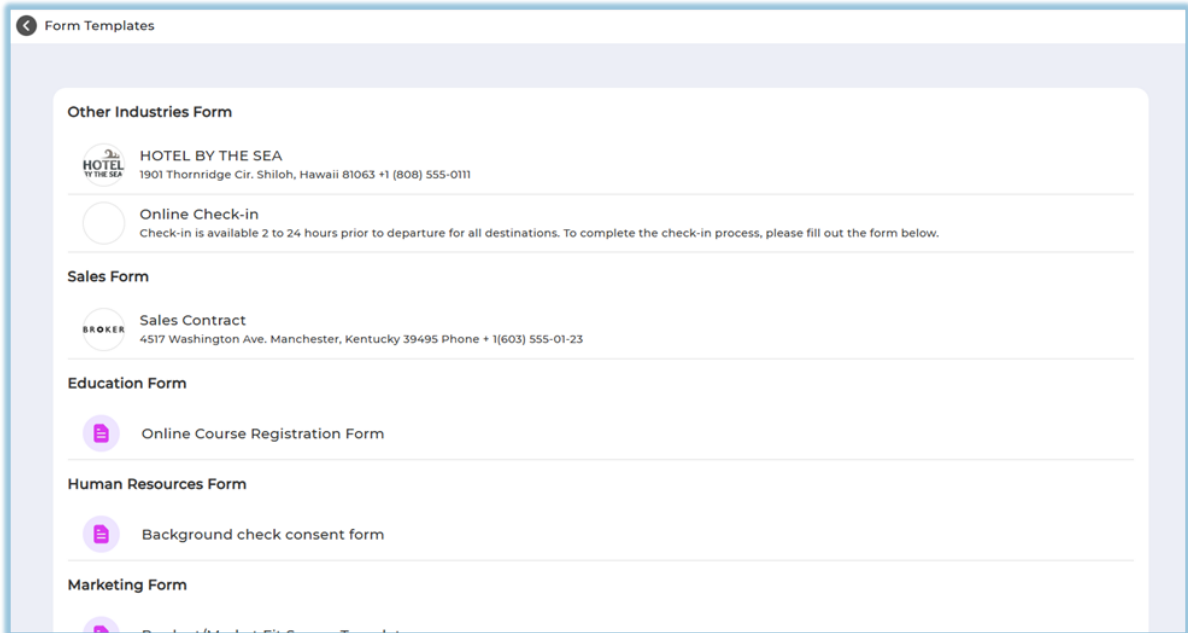

https://converse.bsharpcorp.com/form_builder

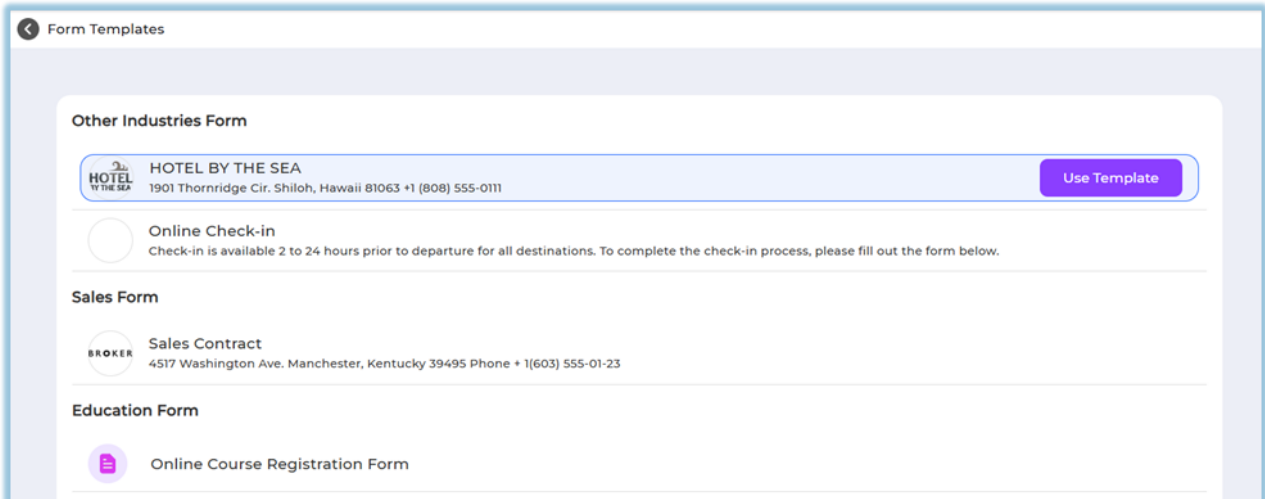

2. Click **Create** on the top-right corner.
3. Select **Using Template**.

4. View the available template categories such as:
 - Other Industries Form
 - Sales Form
 - Education Form
 - Human Resources Form
 - Marketing Form

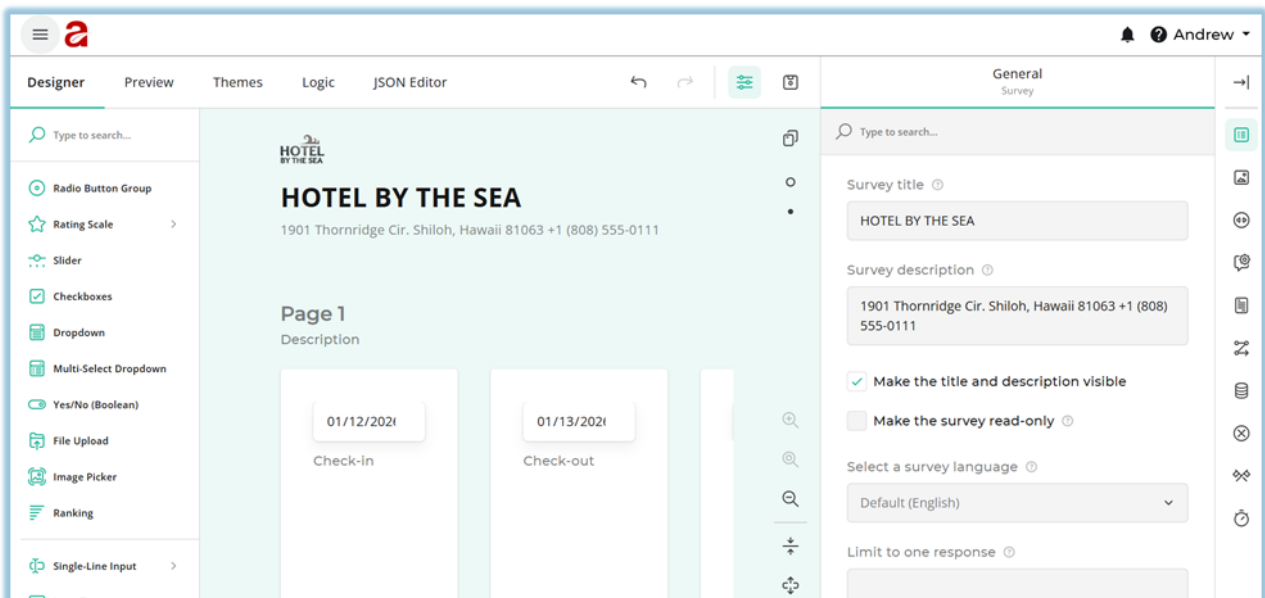

5. Choose a required template and click **Use Template**.

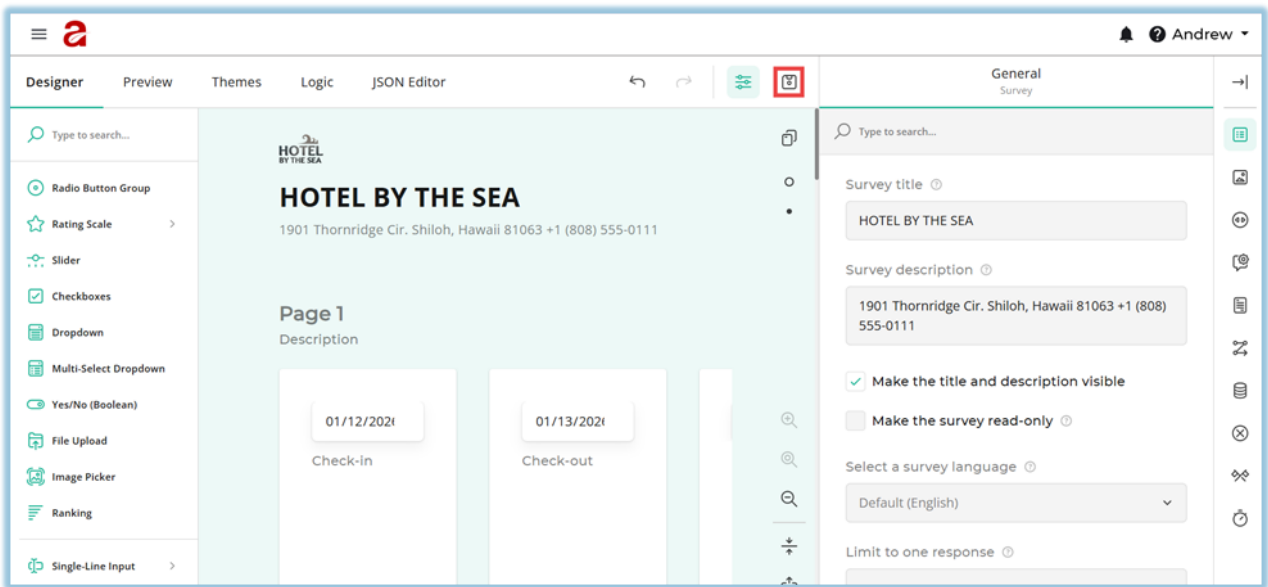

6. Review the form structure created from the template.

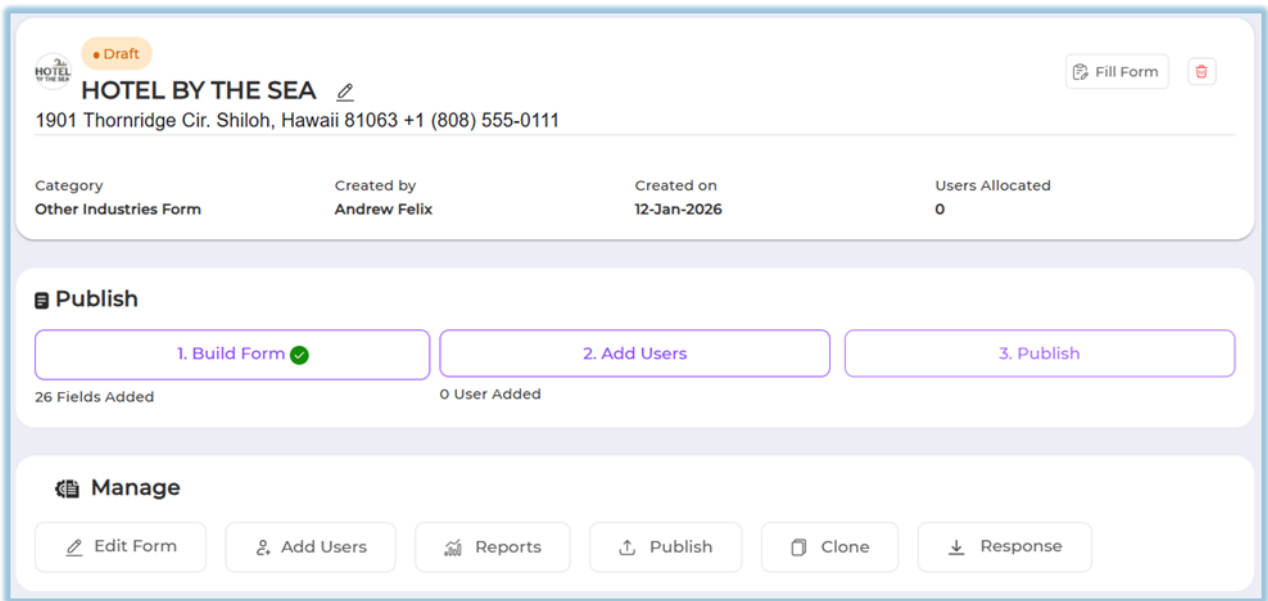

7. Edit the form fields if required (add, remove, or modify fields).

8. Click **Save** to save the form as a draft.

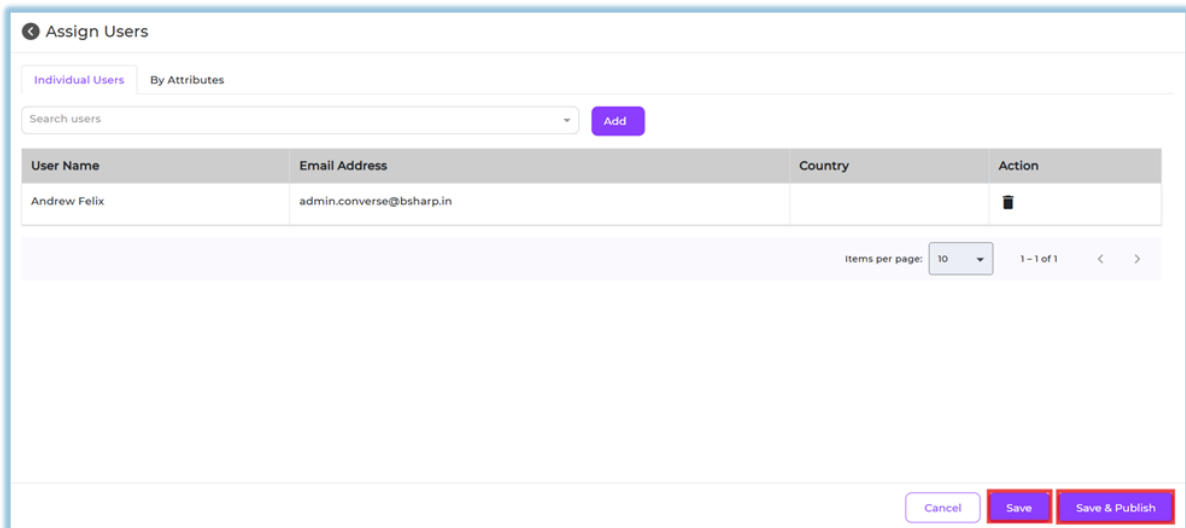

9. After saving, the form appears in the **Forms** list with **Build Form** completed.

10. Open the saved form and select **Add Users**.

11. Add users using one of the following methods:

- **Individual Users** – select and add specific users
- **By Attributes** – select attribute groups or create new attribute rules

12. Click **Save** to keep the form editable, or **Save & Publish** to publish the form.

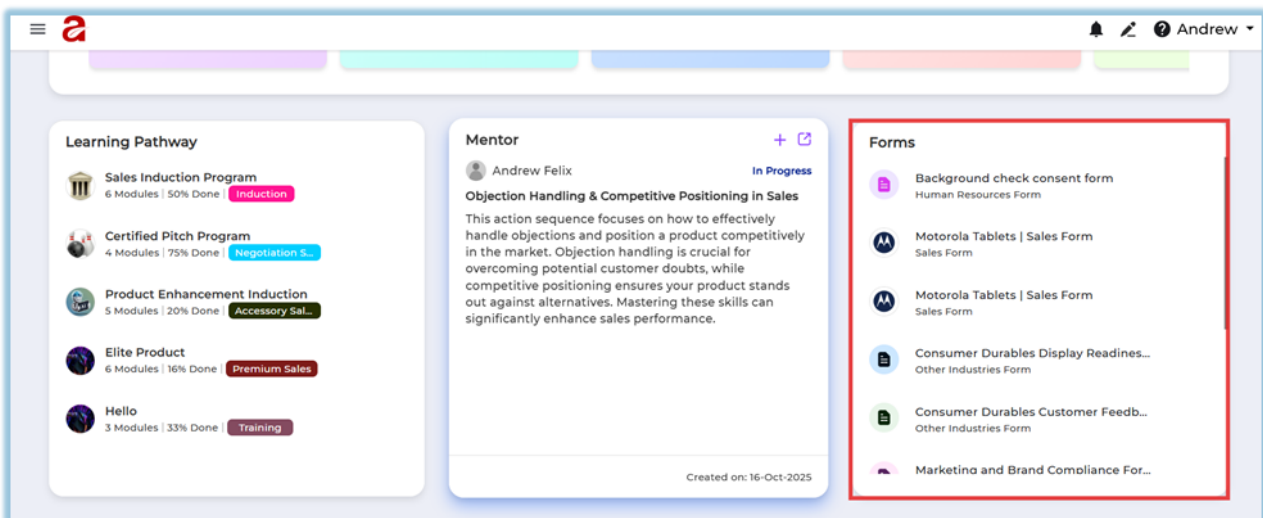

Note:

- Once a form is published, it **cannot be edited**.
- Saving without publishing allows you to return and edit later.

5. User View

If the form is assigned to users, it appears on the **Home page**.

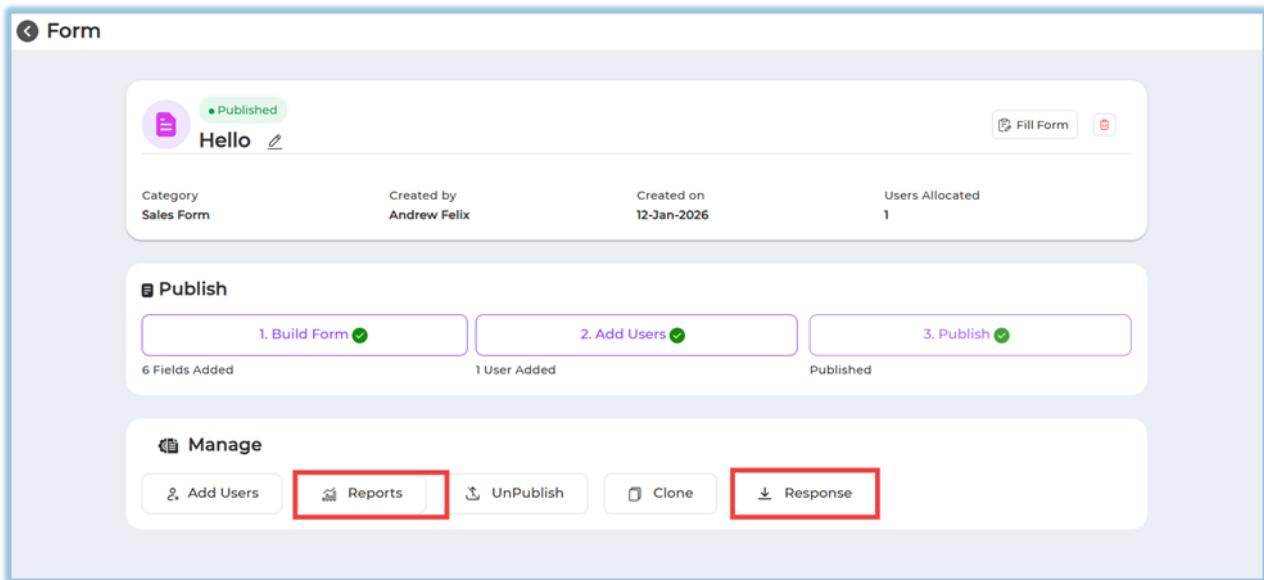

- Users scroll down on the Home page.
- Forms are visible under the **Forms** section.

- All assigned forms are listed in this section for easy access.

6. Reporting

- Form responses can be viewed after the form is published.
- Reports and responses are accessible from the **Manage** section of the form.
- Downloaded responses are available once users start submitting the form.

7. Best Practices

- Review and finalize all form fields before publishing
- Use templates to maintain consistency across teams
- Assign users carefully before publishing to avoid rework
- Save the form as draft if further edits are expected

8. Related Links / FAQs

Q: Can I edit a form after publishing?

No. Once published, the form cannot be edited.

Q: Where can users find assigned forms?

Users can find assigned forms on the Home page under the Forms section.

Q: Can I add users after publishing?

Yes. Users can still be added after publishing.

Q: What actions are available after publishing?

You can add users, unpublish, clone the form, view reports, and download responses.
